REPALO

GUIDE FOR
REMOTE ATTACHMENTS FOR HIGH-DEMOLITION

+39 335 757 4116 | repalo.it | info@repalo.it

WHAT DO YOU CHOOSE?

FLY DEMOLITION SYSTEM

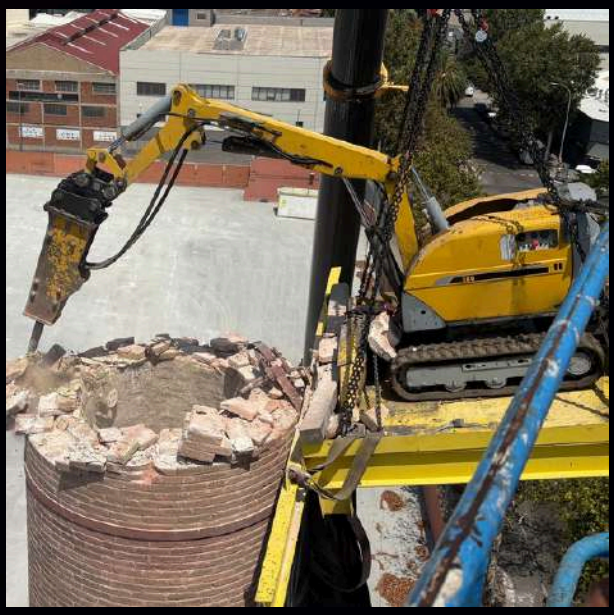
VERY SPECIFIC

A radio-video controlled unit, suspended from a crane, that brings demolition power to any height.

IDEAL WHEN:

- Extreme **working height** is the main challenge
- **No ground access** for traditional machines
- Ideal for **façades, towers** and **complex structures**
- Operators stay **safe outside the danger zone**

VS.



DEMOLITION ROBOTS

MORE VERSATILE

A compact, remote-controlled machine that can operate both at height and in very confined spaces.

IDEAL WHEN:

- Working **inside buildings or confined areas**
- Floor load and machine weight are **critical**
- Precise and **controlled demolition** is required
- Frequent **repositioning** and attachment changes

ROBOT FAST AND AGILE.
RELIABLE AND YOU CAN PUT IT ANYWHERE.

Using a demolition robot at height combines high demolition power with compact dimensions and relatively low machine weight. The robot can be lifted by crane and positioned directly on the working floor, allowing precise demolition in areas where conventional excavators cannot operate. Remote control keeps the operator at a safer distance from falling debris and hazardous zones, while its manoeuvrability and ability to use different hydraulic attachments make it a flexible and efficient solution for demolition on upper floors, rooftops and restricted structures.

FLY DEMOLITION. POWERFUL AND LIMITLESS. REACHES WHERE OTHER MACHINES CAN'T.

Using a Fly Demolition System at height makes it possible to perform controlled demolition where conventional machines or demolition robots cannot be safely positioned. Suspended from a crane and operated remotely, the system can reach extreme heights without requiring support from the structure itself. Its autonomous hydraulic power and ability to operate different demolition attachments make it particularly effective for façades, towers, chimneys and complex structures, while keeping personnel away from hazardous working areas.
